Industry: **Fin-Tech, Consumer apps**  
Company size: **1-10 people**  
Company type: **Private**

## Our Stack

python, java, mysql, javascript, nodejs, php

## Job description

Jebdu Labs is looking for an Android Software Engineer to join us in innovating on the way people pay.

We aim to disrupt the e-payments industry in Ethiopia by focusing on developing a reliable and user-friendly payments service. We're a small tech team aiming to build a world-class user experience. It's not just tech that bring us together. It's the opportunity to have a significant impact on the digital revolution happening in Ethiopia and to catch-up to the rest of the world. By empowering e-payments at scale, we can support the creation of 1000s of jobs.

### Your main responsibilities:

- Create and maintain advanced, native Android applications
- Work together with cross-functional teams to define, design, and ship new features.
- Cover your code with unit tests to ensure robustness, including edge cases, usability, and general reliability.
- Troubleshoot issues and bugs and improve application performance.

### Requirements

- 2+ years experience of working in an Android Developer position
- Significant experience in software development, including work with third-party libraries and APIs
- Significant experience with Java

- Experience working with relational databases such as MySQL or PostgreSQL
- Comfortable writing test suites and specs in our test-driven environment
- Good understanding of the full mobile development life cycle
- You have experience with Software Design Patterns
- You have a solid understanding of Java and related technologies
- You have used and are familiar with Git and Github

**Nice to have:**

- Having at least one app released in the app store

**What we offer**

We offer competitive salaries, an annual bonus, meaningful equity, and free lunches.

**Fired up?**

We'd love to talk to you. Send an email to [exodus@jebdu.com](mailto:exodus@jebdu.com)
